

Clearly Superior.

Traditional Mammogram

GAMMAGRAM™

Ask Your Doctor to Recommend an Imaging Center that Uses Mammography Together with GammaGram™

A BSGI camera produces a remarkably clear image called a GammaGram™. The more advanced imaging centers now use Mammograms and GammaGrams™ together. Mammograms can often be inconclusive. When that happens, you'll agonize, wondering if you have cancer as you wait and wait for more tests and results. With a GammaGram™, you can know the same day.

Mammograms and Gammagrams™ work better together! That's because BSGI (Breast Specific Gamma Imaging) detects cancer that mammography alone might miss. Ask your doctor for an imaging center that can offer a Mammogram in conjunction with a Gammagram.™

Take this literature to your doctor and ask for it by name.
